#### CASE STUDY

## Putting SAP Data to work

Companies that run SAP have a wealth of data at their disposal. This data can be harnessed to make more informed business decisions that can significantly impact the bottom line.

### **However, this is a challenge for many SAP companies**

Creating the necessary reports and analytics using this data is both onerous and time consuming for companies that don't have the skills or the software at their disposal to achieve this.

Furthermore, traditional SAP peripherals (including Business Warehouse and Business Objects) are often cost prohibitive. Typically only companies with a \$10 billion plus turnover can justify the expense and even then the ROI is often not there.

---

## **This is where the team behind Pomerol Partners comes into play.**

Our founders were at the forefront of the BI revolution. We have first-hand experience of how BI solves complex reporting problems, particularly in the SAP data environment, and how it achieves significant cost savings.

We use this experience, together with our deep SAP data knowledge to enable companies to make sense of their vast and complex data environment. This includes streamlining operational reporting and developing sophisticated advanced applications.

## **Leading the way in business intelligence and analytics**

Our team of developers, business analysts, data modellers and industry experts have the necessary skills and ability to use SAP data to build industry leading analytics using a wide range of reporting software.

Our operational reporting helps businesses become more efficient, whilst our specific analytical reports generate significant cost savings.

---

## **How we work**

We are data specialists with experience across a wide range of industries and business processes. We are skilled in collecting, modelling and analysing data and presenting this business information in a format that enables better decision making.

---

### **The process we follow:**

- Question: We always start by establishing the business problem
- Select: We determine what historical and present data to collect and how often to collect this data
- Analyse: We select the optimum software to analyse this data in order to deliver actionable insights
- Action: We deliver targeted reports that enable our clients to make business decisions effectively and efficiently

---

### **Contact us to ensure that your BI investment results in ROI**

Let us help you with the analytics and targeted reports you need to make better decisions and in doing so realise significant cost savings.

# We're ready to partner with your leadership team to future proof your business.

## About Pomerol
